

# AutoPot presents a range of self-watering plant systems all based on the amazing AQUAvalve

## AutoPot Benefits

- Fully automatic supply of water and nutrients.
- Built in wet/dry cycle to mimic natural systems.
- Operates by simple gravity pressure – NO NEED for ELECTRICITY
- Modular system – infinitely expandable – just add more pots

By providing regular water and nutrients, the AutoPot system allows plants to grow without check and to reach their FULL POTENTIAL.

By operating automatically and reliably the AutoPot system allows gardeners to relax, to go away for weekends and still be sure of healthy plants and bumper harvests.

**The easy2grow Kit contains:**

- 47 litre tank and lid
- 2 x 8.5 litre square pots
- AutoPot Tray (2 cavities) and cover
- 1 x AQUAvalve
- 1.5 metres of 6 mm supply pipe
- 2 x Root Control Discs
- 2 x Marix Discs
- 1 x inline filter
- Full instructions

**The easy2grow kit - 2 pot system**

The easy2grow kit is a complete kit, providing the user with everything they need to set up and start growing. The kit is ideal for indoors, greenhouses and outdoors; it will water and feed your plants for up to four weeks and is suitable for a variety of plants, ornamental and edible.

## The One Pot System

The 1Pot System is a single 15 litre pot and tray, which has a separate cavity for the AQUAvalve.

The 1Pot System is extremely versatile and can be used for a wide range of plant types and sizes. Seasonal flowering plants and perennial shrubs thrive and produce an abundance of blooms and foliage because of the constant even watering and feed they receive via the AQUAvalve.

**The 1Pot System contains:**

- 15 litre square pot
- Single cavity tray and lid
- AQUAvalve
- 1.5 metres of 6 mm supply pipe
- Root Control Disc
- Marix Disc
- Full instructions

The **AQUAvalve** is a deceptively simple float switch that operates to deliver fresh liquid nutrients to the plants on demand. A normal float switch would, of course, maintain a constant level in the reservoir and the plants would quickly become waterlogged. AQUAvalve is much smarter than that – it actually

allows the plant to use up all the water in the reservoir before supplying more.

This means that plants experience a natural wet/dry cycle, just as they do in nature, and they certainly respond well.

Both AutoPot systems can be extended to fit any greenhouse or growing area. A bigger tank will be needed but the good news is that any plastic tank or water butt can easily be adapted for use.

### One Pot System – layout

Any number of 1 Pot Systems can be connected to a single tank and automatically watered by gravity.

### easy2grow Kit – layout

Extra modules are available to extend your AutoPot system. Technically there is no limit to the number you can add but with the standard 47 litre tank we would suggest three modules is about right. If you wish to add more pots you need to upgrade to a larger tank.
