

AquaFlow is a well-designed NFT system that can be put together in minutes. Ribbed trays encourage rapid movement of nutrients through the system for maximum aeration and unparalleled plant performance.

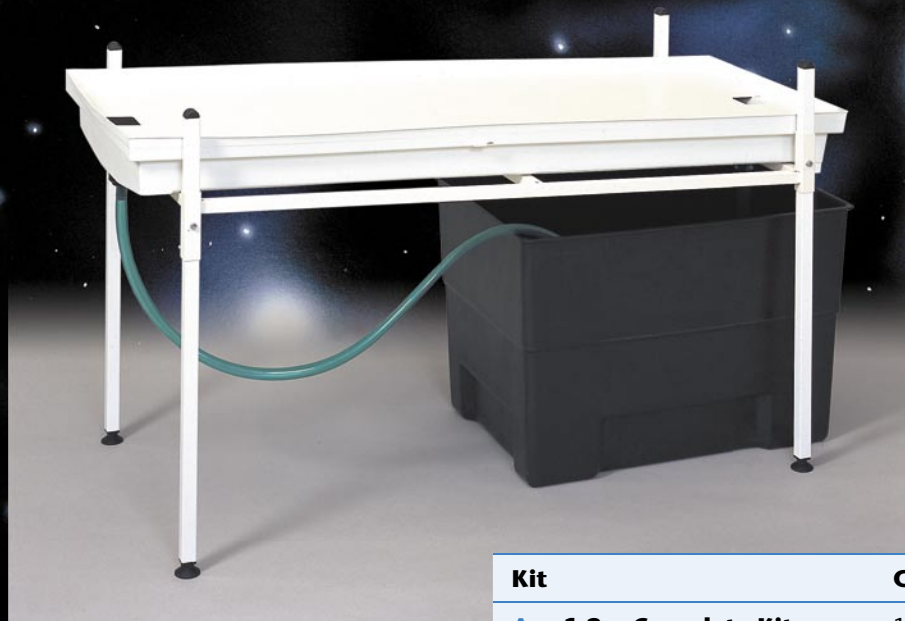

Two tray sizes and modular design allow AquaFlow to be used in many different configurations and to fit into any growing space. AquaFlow can even be stacked up to three trays high for production of clones and small plants in a limited space.

AQUA FLOW

NFT system

NFT system designed by NFT professionals – for professional results

- **Simplicity.** Basic kits in 1.2 m and 1.8 m lengths. Contains everything needed to start growing.
- **Modularity.** Trays connect easily to fit any sized growing area. Three and six tray kits available in both sizes.
- **Performance.** Unique tray design delivers maximum aeration to the roots to supercharge growth.
- **Three Tier options.** The AquaFlow stacking system – ideal for volume production of clones and small plants where space is limited.
