

# BioGreen Jumbo Propagator

BioGreen Jumbo is an amazing propagator, all packed up in a neat little box. Easily assembled, it can hold several large trays of propagation cubes and thus several hundred clones.

## For the grower

- Includes heat mat and thermostat for accurate bottom heat.
- High top allows use with larger plants.
- Easy access through zipped sides.
- Assembled in minutes – no tools needed.
- **THREE YEAR warranty on heat mat**

## For the retailer

- Comes complete in ONE small box.
- Professional service agents in place to deal with any repairs or problems.
- Display model available to help sales.
- **Easy to sell – great for mail order.**

## Applications

**Propagation** – a warm and humid atmosphere ensures brilliant success with cuttings of many species.

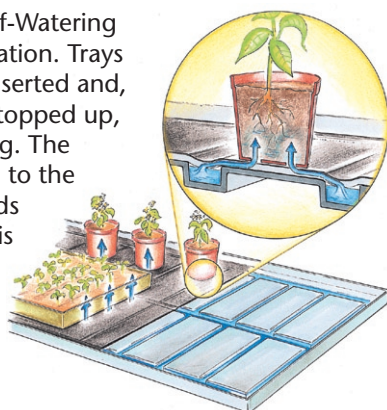

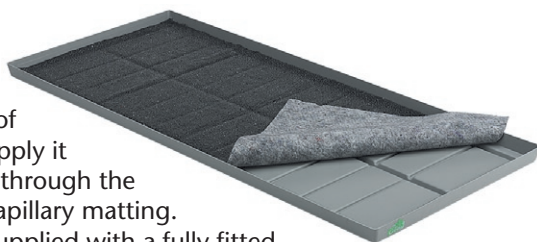

**Plants** – delicate plants and exotic tropicals will flourish in the protective environment found inside the Jumbo.

**Over-wintering** – cherished plants can be held in a Jumbo through the cold dark months and be kept in prime condition for the following summer.

# BioGreen Self-Watering Tray

These useful plastic trays hold several litres of water and supply it to the plants through the medium of capillary matting. Each tray is supplied with a fully fitted capillary mat and is ready for immediate use.

Jumbo Propagator and Self-Watering Tray is the perfect combination. Trays of cuttings can be easily inserted and, as long as the tray is kept topped up, everything is self-regulating. The matting provides moisture to the rooting cubes and also adds humidity to the air. There is nothing left to chance.

Self-Watering Tray – how it works

The BioGreen Self-Watering Tray is 1250 mm x 550 mm

Jumbo Propagator in use

The BioGreen Jumbo Propagator is 1200 mm x 500 mm x 500 mm high
