

CLONEX®

Rooting Hormone Gel

Clonex is a high performance rooting compound. It is a tenacious gel which will remain in contact around the stem, sealing the cut tissue and supplying the hormones needed to promote root cell development, and vitamins to protect the delicate new root tissue. Clonex has a full spectrum of mineral nutrients and trace elements to nourish the young roots, plus anti-microbial agents to protect against fungal contamination.

The ultimate rooting compound, used by professionals and amateurs the world over. CLONEX is a bright, translucent gel – a high performance blend of hormones, vitamins, nutrients and fungicides.

CLONEX is better because:

- It seals cut tissue instantly, eliminating the risk of infection or embolism.
- It contains rooting hormone at 3000 parts per million, the full strength required for explosive root development.
- It contains a full profile of nutrients and trace elements to nourish and empower the new plants.
- It is a gel – far safer than liquids or powders because it cannot splash or blow about. Unlike liquids and powders, CLONEX will remain in contact with the stem right through the rooting period.

Clonex can be used with any rooting medium but it is perhaps most effective with Root Riot.

Growth Technology has Root Riot cubes in a range of useful pack sizes.

Please ask for more information.

Clonex pack sizes are 50 ml, 250 ml and 1 litre. Larger sizes available to the commercial sector.

Since 1989 – 1,000,000,000 clones... and counting
